

Product Data Sheet

Audio Entry via PSTN

Telaccess is a new fully-featured telephone entry system which operates over PSTN. It includes a host of features which would normally be supplied as optional extras.

With a capacity of 1000 users, each with day/night numbers and the ability to control 5 additional entrances, Telaccess is a high performance, cost effective unit which offers a great deal of flexibility for controlling access into a residential or commercial building.

A high resolution graphic display, together with a backlit keypad and function buttons, provides a stylish, easy to use system for the user to access the electronic directory and initiate a call.

Each user has the ability to set call forwarding manually or automatically, and for multi-tenant buildings there is a call log for allocating call costs.

Available as flush or surface mount, constructed with a high level of vandal resistance, Telaccess provides a comprehensive and convenient audio entry system.

Technical specification
