This Wireless Audio Entry System is capable of operating two separate door or gate opening functions and can operate a light, all from the single wireless handset. The standard basic kit is completely battery powered but mains options are available for both the door station and the handset (with re-chargeable batteries). A stainless steel shroud is available for the door entry station. Although signal distances of up to 400 Metres can be achieved in free space, in normal conditions a realistic range would be in the region of 150 Metres (steel clad buildings can reduce ranges significantly).
